total body photography
from Canfield

imaging systems and software
for tracking pigmented lesions

CANFIELD
Software for early detection of melanoma  Whole Body Photography is a well-established tool for managing patients at risk for melanoma. A photographic baseline is invaluable when attempting to detect new lesions or suspicious change in existing lesions in patients with numerous nevi. Many of the leading cancer centers and over sixty percent of dermatology academic centers in the United States employ this technique to aid in the early detection of suspicious lesions.

Fast & versatile body mapping

The Mirror Body Mapping Module enables linking of close-up images to specific points on a patient’s overview photo. Ideal for tracking pigmented lesions (i.e., mole mapping), body mapping is also useful for following psoriasis, eczema and other conditions. Body mapping provides the easiest, most reliable means of accurately comparing and tracking lesions, and conducting total body skin exams.

The Mirror Body Mapping Module can create stand-alone viewer CDs for your patients' self-examinations. The CD also serves as a digital backup to the patient print book.

dermoscopy solutions

Canfield EpiFlash™ for dermoscopy and the full range of clinical photography.

Canfield Nikon D70s Dermoscopy Package

Includes Nikon D70s digital SLR camera, Canfield EpiFlash, 60mm Nikkor lens (90mm equivalent), rechargeable battery, battery charger, 256MB CompactFlash Card, PCMCIA card adapter, USB cable with PortGuard, video cable, and carrying case.

Canfield Nikon D70s Deluxe Package

EpiFlash is replaced with TwinFlash.

Developed by Canfield, the triple-function EpiFlash makes it easy to capture high quality, reproducible photographs for the entire range of dermatologic procedures.
Mirror Body Mapping facilitates total body photography and subsequent patient exams.

Mirror Body Mapping comparisons to baseline photos assist in the detection of new lesions or changes in existing lesions.

Suspicious lesions may be more closely monitored through the use of dermoscopy and Mirror Body Mapping image linking.

The **Mirror Body Mapping Module** plugs into PhotoFile medical image management software to create a fully integrated digital photography and lesion tracking solution. Requires PhotoFile (see back page).

The **DermaGraphix Bundle** includes PhotoFile with Mirror Body Mapping Module.

**Canfield Digital Photo Studio**

**Ideal for high-quality, repeatable patient photography**

The Canfield Digital Photo Studio has everything you need to capture consistent, high-quality patient images. The monostand features a quick release, counter-balanced carriage assembly, indexed vertical post and bidirectional casters. Dual studio strobes travel with the camera ensuring proper lighting for all patient views—face, torso or legs.

**Studio includes:**
- Nikon D70s digital SLR camera
- 256 MB CompactFlash card
- 60 mm Nikkor lens (90 mm equivalent)
- Canfield monostand
- Cross-slide attachment
- Dual 400 watt studio strobes
- Patient posing stage
- Indexed floor mats for patient & camera
- Deluxe backdrop

Originally developed by Canfield for use in clinical trials, the Digital Photo Studio is ideal for the practice in need of reproducible photography.
Canfield’s PhotoFile software serves as the foundation of a scalable imaging system to fit your practice today—and in the future.

PhotoFile organizes images in a familiar patient chart structure and offers HIPAA-friendly features such as patient privacy:

- instant viewing, storage and retrieval of patient images
- compatible with all digital cameras
- on-screen Loupe Tool for close examination of areas of concern
- easy integration with MS Word, PowerPoint and other software packages
- side-by-side viewing and printing
- pre-configured diagnosis and procedure libraries, and more …

Import any image from any source
- digital camera • endoscope • camcorder
- scanner • video microscope

Instant image access using single or multiple criteria
- diagnosis • procedure date • procedure
- keyword in notes • any data field or other criteria …

System requirements: Windows XP Professional (sp2 or higher) or Windows 2000 (sp4 or higher); CD-ROM drive; at least 512MB of RAM; at least 1GB free disk space (more recommended); 1024x768 or higher display with 24-bit color or better; Microsoft Internet Explorer 5.5 or higher; Pentium III or better.

Mirror PhotoFile™ The foundation for Mirror imaging, Canfield’s PhotoFile software provides an affordable solution for medical-specific image management.

*included with DermaGraphix bundle

Total Body Photography Services

Print Books  Let Canfield print your body mapping photos for patient self-examination. All photos are printed at our secure centralized facility on state-of-the-art digital printers which are calibrated and quality assurance tested daily. Photos are then collected into professional print books, available from $140 for 8x10 print books. Call for information.

DermaTrak™ Skin Imaging Centers—DermaTrak provides Total Body Photography at medical imaging centers serving the North Central and Northeast U.S., or call to inquire about a DermaTrak center for your region—toll-free 800-421-4240.

Print books are a valuable aid in detecting changes in lesions.
